

BPE Amstel Dock-3P

The BPE Amstel Dock is ideal for home builders looking for an "EV Charger Ready" solution for their new build projects. This easy-to-install device allows you to quickly and efficiently prepare a site for an EV charger to be installed at a later date. The Amstel Dock can be wall or pole mounted and has three separate knock-outs so the SWA cable can enter from the top, rear, or bottom. When the EV charger is ready to be installed, you simply remove the front cover and attach the BPE Amstel in it's place. This makes the second install fast and easy for electricians.

Main Benefits:

- » Easy-to-install - ideal for home builders/First Fix
- » Wall or pole mounted
- » IP65 for indoor or outdoor installation
- » Three knock-outs for top, rear or bottom cable entry
- » Compact size and lightweight
- » Built in terminal block for safe wire terminations
- » 3 year warranty
